PROFILE

DevOps Engineer with **1 year of freelance experience** in designing, automating, and managing scalable **cloud infrastructure** and **CI/CD pipelines**. Skilled in **microservices architecture** using **AWS, Kubernetes, Terraform**, and **Jenkins**. Experienced in cloud-native application deployment, **Infrastructure as Code (IaC)**, **containerization**, and deployment automation. Proven ability to develop cloud-native applications and deliver secure, scalable, and reliable solutions through modern DevOps practices.

EDUCATION

Lovely Professional University

Jalandhar, India

Bachelor of Technology in Computer Science and Engineering

2022 – 2026

SKILLS

Cloud Platforms: AWS (EC2, S3, Lambda, RDS, Amazon EKS, VPC, Route 53, MSK/Kafka, CloudFormation)

Containers & Orchestration: Kubernetes, Docker, Helm

Infrastructure as Code (IaC): Terraform

CI/CD: Jenkins, Github Actions

Configuration Management: Ansible, Puppet

Monitoring & Logging: Prometheus, Grafana, CloudWatch

Scripting & Programming: Java, Python, Shell/Bash

Security & Policy Management: IAM, CloudTrail

Service Mesh & Networking: ALB, Ingress Controller

Version Control & OS: Git, Linux (Ubuntu, Amazon Linux, CentOS)

CERTIFICATIONS

- AWS Cloud Practitioner Essentials
- Introduction to Linux: The Linux Foundation
- NPTEL - Cloud Computing
- GenAI for IT: Transforming IT with Generative AI
- AWS Multi-Tier VPC Architecture
- IBM – Python 101 for Data Science
- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate

EXPERIENCE

Cloud & DevOps Engineer(Freelance)

Jul 2025 - Jun 2026

- Engineered and deployed **cloud-native applications** using **AWS, Docker, Kubernetes, Terraform, and GitHub Actions**, following DevOps and Infrastructure as Code (IaC) best practices.
- Implemented and optimized **CI/CD pipelines** for **Spring Boot** and **React** applications, improving deployment consistency and accelerating software delivery.
- Provisioned and managed **AWS infrastructure** using **EC2, VPC, IAM, S3, Route 53, and Load Balancers** to support secure and scalable production environments.
- Containerized applications with **Docker** and orchestrated workloads using **Kubernetes**, ensuring high availability, scalability, and deployment portability.
- Enhanced secure **RESTful APIs** and full-stack applications using **Java, Spring Boot, React, MySQL, and JWT authentication**, enabling reliable end-to-end application delivery.
- Established monitoring and deployment workflows using Prometheus, Grafana, Git, GitHub Actions, Linux, and Bash while collaborating with clients to deliver and maintain cloud solutions.

PROJECTS

Cloud-Native AI-Powered Curriculum Management Platform (Attenza)

Apr 2025 - Present

Architected and deployed a production-ready cloud-native academic management platform integrating AI-powered assistance, secure authentication, and real-time attendance management.

- **Tools/Methods:** AWS EC2, Kubernetes (K3s), Docker, Terraform, GitHub Actions, Spring Boot, React, Python, Amazon RDS, Traefik, Prometheus, Grafana, Ollama
- **Impact:** Established a cloud-native microservices platform with Kubernetes, Docker, and Terraform, enabling secure, scalable, and production-ready application delivery.
- Integrated continuous deployments, HTTPS provisioning, auto-scaling, and AI-powered assistance through GitHub Actions, cert-manager, Horizontal Pod Autoscaler (HPA), and Ollama while integrating Prometheus and Grafana for observability.

Intelligent Kubernetes Load Balancer for Microservices

Jul 2024 - Oct 2025

Designed a Kubernetes-native load balancing platform to dynamically scale containerized microservices based on real-time resource utilization.

- **Tools/Methods:** Kubernetes, Docker, Spring Boot, React, Horizontal Pod Autoscaler (HPA)
- **Impact:** Built a containerized microservices platform with Kubernetes and Docker, improving workload scalability through automatic pod scaling based on CPU utilization.
- Implemented real-time infrastructure monitoring and resilient cloud-native deployments using Prometheus, Grafana, Kubernetes Deployments, Services, and autoscaling policies.

Community Plantation & Event Management System

Jan 2024 - Apr 2024

Created a role-based web platform for managing community-driven plantation events and participant engagement.

- **Tools/Methods:** Laravel, MySQL, Blade, JavaScript, Git
- **Impact:** Developed a secure full-stack web application with role-based authentication, event approval workflows, and relational database management using Laravel and MySQL.
- Enabled efficient event lifecycle management through a modular MVC architecture, responsive user interfaces, and scalable CRUD operations, improving maintainability and user experience.

LEADERSHIP & VOLUNTEER EXPERIENCE

A Ray of Hope Charitable Trust

Pune, India

Education & Technology Volunteer

Jun 2023 - Jul 2023

- Mentored students through educational initiatives, promoting practical learning in **Computer Science**, **Cloud Computing**, and **DevOps**.
- Conducted hands-on technical sessions on modern engineering tools, programming fundamentals, and emerging technologies.
- Collaborated with educators and volunteers to organize technology-focused learning sessions and community outreach programs.

ACHIEVEMENTS

- **Head of the Technical Department, Euphoria (Student Organization):** Led technical planning, event management, and cross-functional team coordination to successfully deliver technical and cultural events.
- **Class Representative (CR):** Served as the primary liaison between students and faculty, coordinating academic communication, classroom activities, and student engagement.
- **National Service Scheme (NSS):** Demonstrated leadership by organizing blood donation camps, tree plantation drives, and community outreach initiatives, strengthening project coordination, teamwork, and social impact.
